

SENDKIT DOCS

Credits, enrichment, and validation, end to end

Credits pay for data: finding emails and numbers, browsing search results, and AI-drafted replies. Sending, campaign creation, and manual replies never cost a credit.

What a credit is worth

1 credit equals 1 cent, so 100 credits equal \$1. Every workspace gets a monthly allotment of included credits: 500 on Essential, 1,000 on Plus, 2,000 on Pro. The 400 million lead database is built into every plan, so credits go toward revealing and validating data inside it, not toward access to the database itself.

What costs credits

Action	Cost
Lead finder email discovery	1 credit per email found, refunded automatically when no email is found
Mobile number lookup	20 credits per number
Search results pages	Small fixed credit amount per page, first 3 pages free
AI-generated reply	5 credits per reply

What is always free

Sending

Every email your campaigns send is free, at any volume.

Campaign creation

Building, editing, and launching campaigns costs nothing.

Manual replies

Reading and writing replies yourself, and template-based automatic replies, draw zero credits.

Database access

Browsing the 400 million lead database is included, not metered.

Worked example: sourcing 1,000 leads

Say you search the database for an ICP and page through results to review fit before revealing anything. The first 3 pages are free; each additional page beyond that costs a small fixed amount. You then reveal emails for 1,000 leads: only the leads where an email is actually found draw a credit, at 1 each, and every miss is refunded, so your spend tracks real results, not attempts. If 50 of those leads also need a mobile number, add 20 credits each, 1,000 credits for the 50. None of the sending, campaign setup, or manual reply work that follows adds anything on top.

READING THE TOTAL AGAINST YOUR PLAN

Add up what a sourcing run actually found, not what it searched, then check that against your monthly included credits: 500 on Essential, 1,000 on Plus, 2,000 on Pro. A run that mostly returns hits will use more of the balance than one with a lot of misses, since misses are refunded.

Check your credit balance

Open your workspace's credit balance and compare it against a sourcing run you have planned before you start revealing leads.
