

SENDKIT DOCS

Generating reports in SendKit

Reporting in SendKit comes down to four moves: scope the date range, generate the report, add recipients for recurring delivery, and apply your own branding from Pro up.

Before you generate: keep the workspace clean

A report is only as clean as the workspace behind it. Agencies should run one workspace per client, so each report pulls from that client's own mailboxes, leads, and campaigns with nothing mixed in from anyone else. Consistent reply tags (interested, waiting, pricing question, meeting request) keep the reply numbers behind your report easy to defend when a client asks what is in them.

The four steps

01 Scope the date range

Analytics supports date-range filtering. Set it to the exact window you are reporting on, a specific month, a campaign's full run, or the last 7, 30, or 90 days, so every number in the report is scoped to what actually happened in that period.

02 Generate the report

With the range set, generate the report for the workspace. The output covers campaign results for the window you scoped, ready to send onward as a client update or an internal summary.

03 Add recipients for recurring delivery

Reports can be delivered by email on a schedule. Add each person who should receive them, a client contact, an account lead, your manager, as a report recipient. Remove a recipient the same way when someone rolls off the account, so reports never keep flowing to an old address.

04 Apply your branding

On Pro (\$499/mo) and above, white-label report branding replaces SendKit's branding with yours, so client-facing reports carry your agency's name. Set it once and every report you generate or schedule uses it.

WORTH KNOWING

Scheduled recipients receive reports by email without ever logging in, so a client who never opens the dashboard still sees their numbers every period, on time, without you exporting anything by hand.

Generate your first report

Scope the last 30 days in analytics, generate the report, and add one recipient to put delivery on autopilot.
