

SENDKIT DOCS

Mailbox health and underperformers

Not every mailbox in a fleet performs the same, and it is worth checking regularly rather than waiting for a campaign to reveal the problem.

Filter for health above 95

Each mailbox carries its own health score. Filtering your mailbox list to show only those above 95 is the fastest way to see, at a glance, which mailboxes are pulling their weight and which ones are not. A mailbox that drops below that line is worth investigating before it drags down a campaign's results.

Disable sending toggle

Pauses a mailbox from cold sending while keeping warm-up running, so you can investigate without pulling it from your fleet entirely.

Cold vs warm-up reply filter

Email Insights lets you filter reply activity by cold versus warm-up. A mailbox can look fine on total replies while its cold campaign replies are quiet, because most of what you see is warm-up traffic replying to itself.

How long a well-run mailbox lasts

A mailbox that is run well, kept under sending limits, warmed up properly, and not overloaded, can stay productive for 6 to 12 months or longer. Mailboxes that get pushed too hard or neglected can burn out in a matter of weeks. The difference usually comes down to whether the basics, health monitoring, sensible volume, ongoing warm-up, were followed consistently.

A quick routine worth keeping

01 Filter above 95, weekly

Do this weekly if you are running any real volume.

02 Check the cold reply filter

Anything below 95, check cold replies before assuming it is dead weight.

03 Disable, do not ignore

Turn off sending on anything clearly underperforming rather than letting it keep sending into a shrinking reputation.

WHY THIS WORKS ON SENDKIT

SendKit tracks a real health score and reply activity at the individual mailbox level, so underperformers show up clearly instead of being averaged out and hidden inside your overall campaign numbers.

Rank your mailboxes by health now

Open your mailboxes view, filter for health above 95, and flag anything below it for the cold reply check.
