

SendKit vs EmailBison

The short version: EmailBison is the one other platform that shares SendKit's dedicated-IP philosophy, and that puts both ahead of shared-pool tools. So the real comparison isn't infrastructure. It's what runs on top of it and what you pay: SendKit adds the lead finder, dialer, AI reply agent, and MCP on the same foundation, at \$499 vs \$599 at the 500K email tier.

A NOTE ON REVIEWS

- EmailBison has no public review track record, it isn't listed on G2, Capterra, Trustpilot, or TrustRadius (invite-only by design; checked 2026-07-11 and re-confirmed via the G2 data API 2026-07-12). Judge it on a live test rather than testimonials, the same standard we invite for SendKit.

Switching takes about 30 minutes. Campaigns, sequences, and leads move over via API key. Mailboxes bought through InboxKit move in one step. Want the step-by-step? Ask for the **Cold Email Platform Migration Kit**.
