

# SendKit vs Lemlist

**The short version:** Lemlist has grown into a genuinely capable multichannel outreach tool, lemwarm included on every plan, a real 40-tool MCP, conditional LinkedIn/call/SMS sequences. What it doesn't have is infrastructure. Sending rides on your own Google/Microsoft/SMTP mailboxes, the flat plan caps you at 50,000 emails a month, multichannel senders are seat math (5 per user at \$109 each), verification burns credits on top of the plan, and nothing monitors blacklists. SendKit is the layer Lemlist skips: dedicated IPs, isolation, and the full deliverability suite on every plan, and Lemlist reviewers' number-one complaint is exactly the one flat-priced infrastructure removes.

|                                | SendKit                                                                                                | Lemlist                                                                                                                            |
|--------------------------------|--------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sending infrastructure</b>  | Dedicated IPs and fully isolated sending on every plan, from \$99                                      | None of its own, sends through your Google/Microsoft/SMTP mailboxes; "rotating IPs" is listed, but no dedicated-IP offering exists |
| <b>Pricing model</b>           | Flat platform price. Unlimited team members                                                            | Email plan \$69/mo flat but hard-capped at 50,000 emails/mo; Multichannel is \$109 per user with 5 senders per user                |
| <b>Email volume</b>            | Scales with your mailboxes and plan                                                                    | 50K/mo ceiling on the flat plan; uncapped only on the per-seat Multichannel plan                                                   |
| <b>Email verification</b>      | Built in, every plan                                                                                   | Credit-metered: \$0.05 per verified email, billed on top of the subscription                                                       |
| <b>Blacklist monitoring</b>    | Built in, real-time                                                                                    | Not mentioned anywhere on their site                                                                                               |
| <b>Inbox placement testing</b> | Built in, every plan                                                                                   | "Deliverability testing" language, but no seed-list placement test is described                                                    |
| <b>Warmup</b>                  | Native: guardrails tuned per mailbox type, plus a high-quality seed pool used only with your mailboxes | lemwarm included on every plan, credit where due; peer-network model                                                               |
| <b>Health controls</b>         | Per-mailbox visibility, auto-pause when health drops                                                   | Cap-based auto-pause before unsafe sending limits; health alerts exist, remediation is manual                                      |
| <b>CLI + MCP</b>               | Both. Hosted, unmetered, smart routing, 5-10x higher rate limits                                       | Real first-party MCP with 40+ tools on all plans, credit for shipping it; no CLI, API rate limits unpublished                      |
| <b>White-label</b>             | Full, from \$499: reports, login, URL, API, logo, colors                                               | Not offered                                                                                                                        |

## WHAT YOU GET WITH SENDKIT THAT LEMLIST DOESN'T HAVE

- **Dedicated IPs and isolated sending on every plan.** Your deliverability is never a function of your own raw mailbox reputation.
  - **Blacklist monitoring.** Real-time alerts when any sending IP hits a blacklist, absent from Lemlist's site entirely.
- **No 50,000-email ceiling and no 5-senders-per-seat math.** Sending scales with your mailboxes; team size costs nothing.
  - **Real inbox placement testing before each campaign, not a pre-send copy-and-DNS check.**

- **Verification included.** No \$0.05-per-email credit meter running on top of your subscription.
- **New-gen CLI + MCP connection.** Lemlist shipping a 40-tool MCP is real credit, but SendKit pairs the MCP with a CLI, hosted and unmetered, with smart routing and 5-10x higher rate limits. Run campaigns, leads, replies, and a hundred other things from Claude, your terminal, or your own scripts.
- **Health-based per-mailbox auto-pause.** Lemlist pauses at volume caps; SendKit also acts when a mailbox's actual health drops.
- **Full white-label.** Login screen, URL, API calls, logo, and colors all carry your brand. Not offered by Lemlist.

#### CLEAR EXPECTATIONS: WHAT YOU GET

- Low bounce rate and better deliverability
- Better time to lead from the reply agent and reply system
- Better white-label report system and custom GTM reporting
- Better inbox pricing and diversification across Google, Microsoft, and Azure mailboxes
- Better scaled pricing on higher volumes. The platform is made for scale
- Better advanced settings for sending management
- Faster inbox loading for faster time to lead
- Unlimited workspaces and team members with custom roles
- A way clearer, easier platform, built for heavy Claude users

**WHERE LEMLIST IS STRONG:** True multichannel with conditional logic (email + LinkedIn visits/invites/voice notes + calls + SMS + WhatsApp), lemwarm bundled on every seat, a real MCP + AI-agent surface, and responsive support. Reviewers consistently praise the sequence builder and personalization at scale (GetApp 4.6/5 across 387 verified reviews).

#### WHAT LEMLIST USERS REPORT

G2 4.5/5 ACROSS 263 REVIEWS, FULL CORPUS MINED 2026-07-12; GETAPP 387 VERIFIED REVIEWS; TRUSTRADIUS

- On G2, pricing and support tie as the most-mentioned dislikes (26 mentions each of 262 mined answers): "A little pricey compared to competitors", and one reviewer's dislike list opens simply with "Deliverability Issues."
- **Cost that climbs with scale is the most consistent complaint:** "becomes expensive as team size grows"; "pricing is high for beginners or small businesses." Flat-priced infrastructure removes that axis entirely.
- **Data quality:** "email address we get of leads could be improved... still a bounce back rate", bounces that dedicated IPs plus built-in validation are designed to keep off your domains.
- **Stability:** "platform hangs sometimes"; campaign and contact editing described as cumbersome, with "limitations in editing queued emails."
- **LinkedIn automation risk:** reviewers report restricted LinkedIn accounts when maxing out automation limits.

**Switching takes about 30 minutes.** API key in, campaigns, sequences, and leads transfer automatically. Most teams finish in about 30 minutes. Mailboxes bought through InboxKit move in one step. Want the step-by-step? Ask for the **Cold Email Platform Migration Kit**.
