

SendKit vs QuickMail

The short version: QuickMail is a respected 10-year agency workhorse with genuinely clever deliverability automation. But by its own FAQ it owns no sending servers at all, it automates your Gmail/Outlook accounts, its warmer was discontinued in favor of a partner tool, validation means paying a third party, and there is no API below \$99, no webhooks below \$299, and no CLI or MCP at any price. SendKit is the full stack under one flat price: dedicated IPs, isolation, warmup, validation, placement testing, and a new-gen CLI + MCP interface included.

	SendKit	QuickMail
Sending infrastructure	Dedicated IPs and fully isolated sending on every plan, from \$99	None, their own FAQ: "QuickMail does not send the email through proprietary servers"; your Gmail/Outlook IPs do the sending
Warmup	Native: guardrails tuned per mailbox type, plus a high-quality seed pool used only with your mailboxes	Own warmer discontinued; free integration with partner tool MailFlow
Email validation	Built in, every plan	Not native, pay ZeroBounce/NeverBounce/Bouncer separately
Inbox placement testing	Built in, every plan	Not offered
Blacklist monitoring	Built in, real-time	Free blacklist + SPF/DKIM monitoring included, credit where due
API access	Included, with 5-10x higher rate limits	Paywalled: no API on \$49 Starter; webhooks only on \$299 Agency
CLI + MCP	Both. Hosted, unmetered, run campaigns and a hundred other things from Claude, terminal, or scripts	Neither exists, at any price. Automation ceiling is Zapier + gated REST
AI reply handling	AI reply agent reads, tags, and auto-responds above your confidence threshold	Sentiment analysis only; replies are human-triaged in the shared inbox
White-label	Full, from \$499: reports, login, URL, API, logo, colors	Not offered, despite the agency positioning
Volume limits	Scales with your mailboxes and plan	Caps per tier: 5,000 emails + 1,000 contacts on Starter; extra workspaces \$49 each

WHAT YOU GET WITH SENDKIT THAT QUICKMAIL DOESN'T HAVE

- **An actual sending layer.** Dedicated IPs and isolated infrastructure on every plan, QuickMail's own FAQ confirms your deliverability lives and dies on your raw Gmail/Outlook reputation.
- **Validation included.** Every plan, no third-party bill to ZeroBounce or NeverBounce before every send.
- **Native warmup.** Per-mailbox-type guardrails and a seed pool we own, not a discontinued product replaced by a partner dependency.
- **Inbox placement testing.** Test inbox vs spam placement before each campaign. Absent on QuickMail.

- **New-gen CLI + MCP connection.** Run campaigns, leads, replies, reports, and a hundred other things from the same interface, Claude, your terminal, or your own scripts. QuickMail has no MCP, no CLI, and locks even its REST API behind the \$99 plan.
- **Full white-label.** Reports, login screen, URL, API, logo, and colors carry your brand, QuickMail's agency plan offers none of it.
- **AI reply agent.** Reads and tags every reply, auto-responds above the confidence threshold you set, QuickMail stops at sentiment labels.
- Unlimited workspaces. QuickMail charges \$49 per workspace beyond two, even on its \$299 Agency plan.

CLEAR EXPECTATIONS: WHAT YOU GET

- Low bounce rate and better deliverability
- Better time to lead from the reply agent and reply system
- Better white-label report system and custom GTM reporting
- Better inbox pricing and diversification across Google, Microsoft, and Azure mailboxes
- Better scaled pricing on higher volumes. The platform is made for scale
- Better advanced settings for sending management
- Faster inbox loading for faster time to lead
- Unlimited workspaces and team members with custom roles
- A way clearer, easier platform, built for heavy Claude users

WHERE QUICKMAIL IS STRONG: Deliverability automation is genuinely smart: Deliverability AI scores every inbox daily, auto-swaps sending to the healthiest accounts, and cycles weak ones through recovery. Unlimited seats and senders on every plan, a solid agency dashboard with audit logs, native LinkedIn steps, white-glove migration, and a decade of track record since 2014.

WHAT QUICKMAIL USERS REPORT

G2 4.7/5 ACROSS 98 REVIEWS, FULL CORPUS MINED 2026-07-12

- A small, mostly positive corpus; the recurring dislikes cluster on pricing and support speed (10 and 8 mentions of 97 answers): "Customer service might be bit slow on some days", and one 2024 reviewer's dislike list reads simply "Pricing. SPAM FILTER. BUGS."

Switching takes about 30 minutes. API key in, campaigns, sequences, and leads transfer automatically. Most teams finish in about 30 minutes. Mailboxes bought through InboxKit move in one step. Want the step-by-step? Ask for the **Cold Email Platform Migration Kit**.
