

SendKit vs Reply.io

The short version: Reply.io is an ambitious all-in-one sales-engagement suite, multichannel sequences, a contact database, an AI SDR. But all of it sends through your own Google and Microsoft mailboxes: Reply.io owns no sending infrastructure at all, and its "deliverability suite" is configuration hygiene, not active protection. SendKit is the opposite trade: dedicated IPs and isolated infrastructure on every plan, with validation, blacklist monitoring, and placement testing built in, and a CLI plus an unmetered MCP instead of a credit-metered one.

	SendKit	Reply.io
Sending infrastructure	Dedicated IPs and fully isolated sending on every plan, from \$99	None of its own. Sends entirely through your Google/Microsoft mailboxes
Pricing model	Flat platform price. Unlimited team members	Per user + active-contact tiers; LinkedIn \$69/mo per account and calls/SMS \$29/mo per account on top
Mailboxes	Unlimited	"Unlimited" under a Fair Usage Policy, their own FAQ says the real number depends on your contact tier
Email validation	Built in, every plan	Paid add-on, from \$20 per month
Blacklist monitoring	Built in, real-time	Not offered
Inbox placement testing	Built in, every plan	Not offered
Warmup	Native: guardrails tuned per mailbox type, plus a high-quality seed pool used only with your mailboxes	Included, but powered by MailToaster.ai, a partner product
Health controls	Per-mailbox visibility, auto-pause when health drops	Per-mailbox visibility only, no auto-pause; fixing is left to you
CLI + MCP	Both. Hosted, unmetered MCP plus CLI and extensive APIs with smart routing and 5-10x higher rate limits	MCP exists, but its analytics tools consume paid API credits; no CLI; API capped at 100 req/min, 3,000 req/hr
White-label	Full, from \$499: reports, login, URL, API, logo, colors	Offered; pricing unpublished

WHAT YOU GET WITH SENDKIT THAT REPLY.IO DOESN'T HAVE

- **An actual sending layer.** Dedicated IPs and isolated infrastructure on every plan, your deliverability stops depending on raw Gmail/Outlook reputation and their policy changes.
 - **Inbox placement testing.** Test inbox vs spam placement before each campaign. Absent on Reply.io.
- **Blacklist monitoring.** Real-time alerts when any sending IP hits a blacklist. Absent on Reply.io.
 - **Validation included.** Every plan, not a \$20/month add-on on a platform that sells deliverability.

- **Per-mailbox auto-pause.** Reply.io shows you the health problem; SendKit acts on it before it burns the mailbox.
- **Flat, predictable pricing.** No active-contact treadmill, no per-channel add-ons, no per-seat math. Unlimited workspaces and team members.
- **New-gen CLI + MCP connection.** Run campaigns, leads, replies, reports, and a hundred other things from the same interface, Claude, your terminal, or your own scripts. No credit meter on stats calls, no 100-requests-per-minute ceiling.
- **Dialer in the Unibox.** A reply lands, you dial the lead right there, on Reply.io calling is a \$29/month-per-account add-on.

CLEAR EXPECTATIONS: WHAT YOU GET

- Low bounce rate and better deliverability
- Better time to lead from the reply agent and reply system
- Better white-label report system and custom GTM reporting
- Better inbox pricing and diversification across Google, Microsoft, and Azure mailboxes
- Better scaled pricing on higher volumes. The platform is made for scale
- Better advanced settings for sending management
- Faster inbox loading for faster time to lead
- Unlimited workspaces and team members with custom roles
- A way clearer, easier platform, built for heavy Claude users

WHERE REPLY.IO IS STRONG: True multichannel conditional sequences (email + LinkedIn + calls/SMS + WhatsApp with branching), a 1B-contact live database with website-visitor reveal, and a real first-party MCP, credit for shipping one. Jason AI SDR is a serious product if you want a done-for-you motion from \$500/month.

WHAT REPLY.IO USERS REPORT

G2 4.6/5 ACROSS 1,375 REVIEWS, 997 DISLIKE ANSWERS MINED 2026-07-12; TRUSTPILOT 4.5/5 ACROSS 241 REVIEWS; TRUSTRADIUS

- On G2, support and integrations are the most-mentioned dislikes (87 mentions each): "Pricing is higher compared to similar tools"; "The Google Chrome integration is very buggy."
- Pricing opacity: "only found out after payment that... unlimited warmup wasn't included"; reviewers "struggled quite a bit to understand the pricing model."
- Silent failures: "some emails are not sent for whatever reason."
- Integration friction: "connecting to some third-party mail servers is more difficult than it should be."
- In fairness: their support is genuinely praised, fast and human. The complaints cluster on cost clarity and sending reliability, which is exactly the layer SendKit owns.

Switching takes about 30 minutes. API key in, campaigns, sequences, and leads transfer automatically. Most teams finish in about 30 minutes. Mailboxes bought through InboxKit move in one step. Want the step-by-step? Ask for the **Cold Email Platform Migration Kit**.
