

SendKit vs Saleshandy

The short version: Saleshandy deserves credit: flat pricing, unlimited mailboxes, and a real MCP + CLI on every plan. The difference is underneath, it still sends through your own connected mailboxes, with dedicated IPs sold as an add-on at unpublished pricing, hard email-volume caps on every tier, and protection that stops at a sequence-level bounce pause. SendKit puts the infrastructure itself on every plan: dedicated IPs, isolation, blacklist monitoring, placement testing, and per-mailbox auto-pause, with no volume treadmill.

	SendKit	Saleshandy
Sending infrastructure	Dedicated IPs and fully isolated sending on every plan, from \$99	Sends through your connected mailboxes; dedicated IP is an add-on inside their mailbox upsell, pricing unpublished
Email volume	Scales with your mailboxes and plan	Hard caps per tier: 6,000/mo on Starter, 150,000 on Pro, 240,000 on Scale
Email validation	Built in, every plan	One-time bonus credits that don't renew; ongoing verification is a metered add-on
Blacklist monitoring	Built in, real-time	Not offered, sender rotation is pitched as prevention, nothing monitors or alerts
Inbox placement testing	Built in, every plan	A spot-check tool exists; automated placement testing not evidenced
Health controls	Per-mailbox visibility, auto-pause when health drops	Bounce Guard pauses the sequence on bounce spikes, and resume is manual
Warmup	Native: guardrails tuned per mailbox type, plus a high-quality seed pool used only with your mailboxes	Unlimited warmup included; pool mechanics undisclosed
AI reply handling	AI reply agent reads, tags, and auto-responds above your confidence threshold	None, replies are human-triaged in the unified inbox
CLI + MCP	Both, hosted and unmetered, with smart routing and 5-10x higher rate limits	Both included on all plans, genuine credit; rate limits unpublished, AI features metered by add-on credits
Buying mailboxes	Via InboxKit, one-step move	\$2.99-3.99/mailbox with a 25-mailbox minimum on the flexible annual tier; renewal prices "may differ"

WHAT YOU GET WITH SENDKIT THAT SALESHANDY DOESN'T HAVE

- **The infrastructure itself.** Dedicated IPs and isolated sending are the plan, not an add-on with unpublished pricing bolted onto a mailbox bundle.
 - **Blacklist monitoring.** Real-time alerts when any sending IP hits a blacklist. Saleshandy has rotation as prevention, but nothing watching.
- **No volume treadmill.** Saleshandy caps emails per month on every tier even while advertising unlimited accounts; SendKit's sending scales with your mailboxes.
 - **Automated inbox placement testing before each campaign, not a one-off spot check.**

- **Per-mailbox auto-pause.** Their Bounce Guard stops the sequence after bounces spike and waits for a human; SendKit acts per mailbox, before the damage spreads.
- **New-gen CLI + MCP connection, hosted and unmetered.** Sales handy shipping MCP + CLI is real credit, but ours runs deeper: smart routing, 5-10x higher rate limits, and no add-on credit meters on the AI surface. Run campaigns, leads, replies, and a hundred other things from the same interface, Claude, terminal, or your own scripts.
- **AI reply agent.** Reads and tags every reply, auto-responds above the confidence threshold you set, Sales handy leaves replies to your team.
- **Dialer in the Unibox.** A reply lands, you dial the lead right there.

CLEAR EXPECTATIONS: WHAT YOU GET

- Low bounce rate and better deliverability
- Better time to lead from the reply agent and reply system
- Better white-label report system and custom GTM reporting
- Better inbox pricing and diversification across Google, Microsoft, and Azure mailboxes
- Better scaled pricing on higher volumes. The platform is made for scale
- Better advanced settings for sending management
- Faster inbox loading for faster time to lead
- Unlimited workspaces and team members with custom roles
- A way clearer, easier platform, built for heavy Claude users

WHERE SALES HANDY IS STRONG: The developer/AI surface is unusually complete for its price: MCP + CLI + open API on every plan, plus a machine-readable pricing page built for AI agents. Aggressive entry pricing (\$25-36/mo with unlimited mailboxes and warmup) and an integrated 852M-contact Lead Finder with waterfall enrichment.

WHAT SALES HANDY USERS REPORT

G2 4.6/5 ACROSS 648 REVIEWS, FULL CORPUS MINED 2026-07-12; TRUSTPILOT 4.7/5 ACROSS 770 REVIEWS

- On G2, warmup is the single most-mentioned dislike (54 mentions of 648 answers), with plan limits right behind (51): "Maybe they could have given more limits for the plans."
- Sequence-editor bugs: "sequence generation not storing stages"; "issues with sending HTML emails."
- Lead Finder shortfalls: reviewers "unable to gather the leads they had paid for."
- Warmup confusion for first-timers, and polarized support experiences: "they stopped responding to my e-mails."

Switching takes about 30 minutes. API key in, campaigns, sequences, and leads transfer automatically. Most teams finish in about 30 minutes. Mailboxes bought through InboxKit move in one step. Want the step-by-step? Ask for the **Cold Email Platform Migration Kit**.
